March 2026

In the beginning, cavemen hunted, gathered, and shared.  
The primary measure for accounting was emotion.

Modern man found this complicated, and decided to collapse it all  
into a simple one-dimensional measure, and call it money.

## The Problem

Coordination is hard.

Multi-party deals require:

- intermediaries
- trust
- multiple steps
- risk of failure

Most systems reduce everything to price.

→ complex agreements are difficult to express and execute

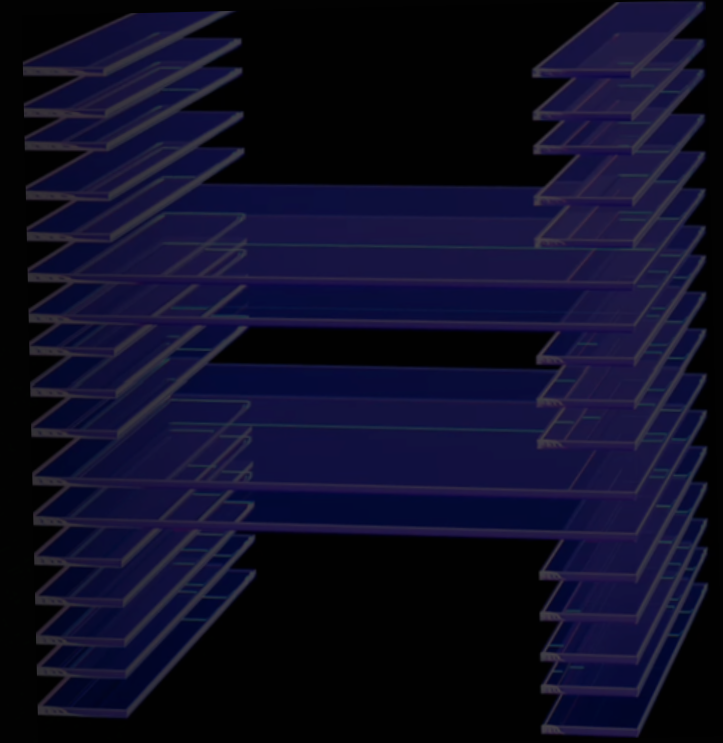

K

# Hello future coordination

*Where agreements become executable*

Early in the 3rd millenium, a new way of thinking met a new way of remembering

*Embedding trust into AI-driven coordination*

K

## What is Katomia?

Katomia is a real-time coordination engine for multi-party value exchange

Built on Hedera using HTS

Fast finality • Low fees • Native atomic execution

No smart contracts required

# K Katomia - How it works

1. Create a coordination space ("game")

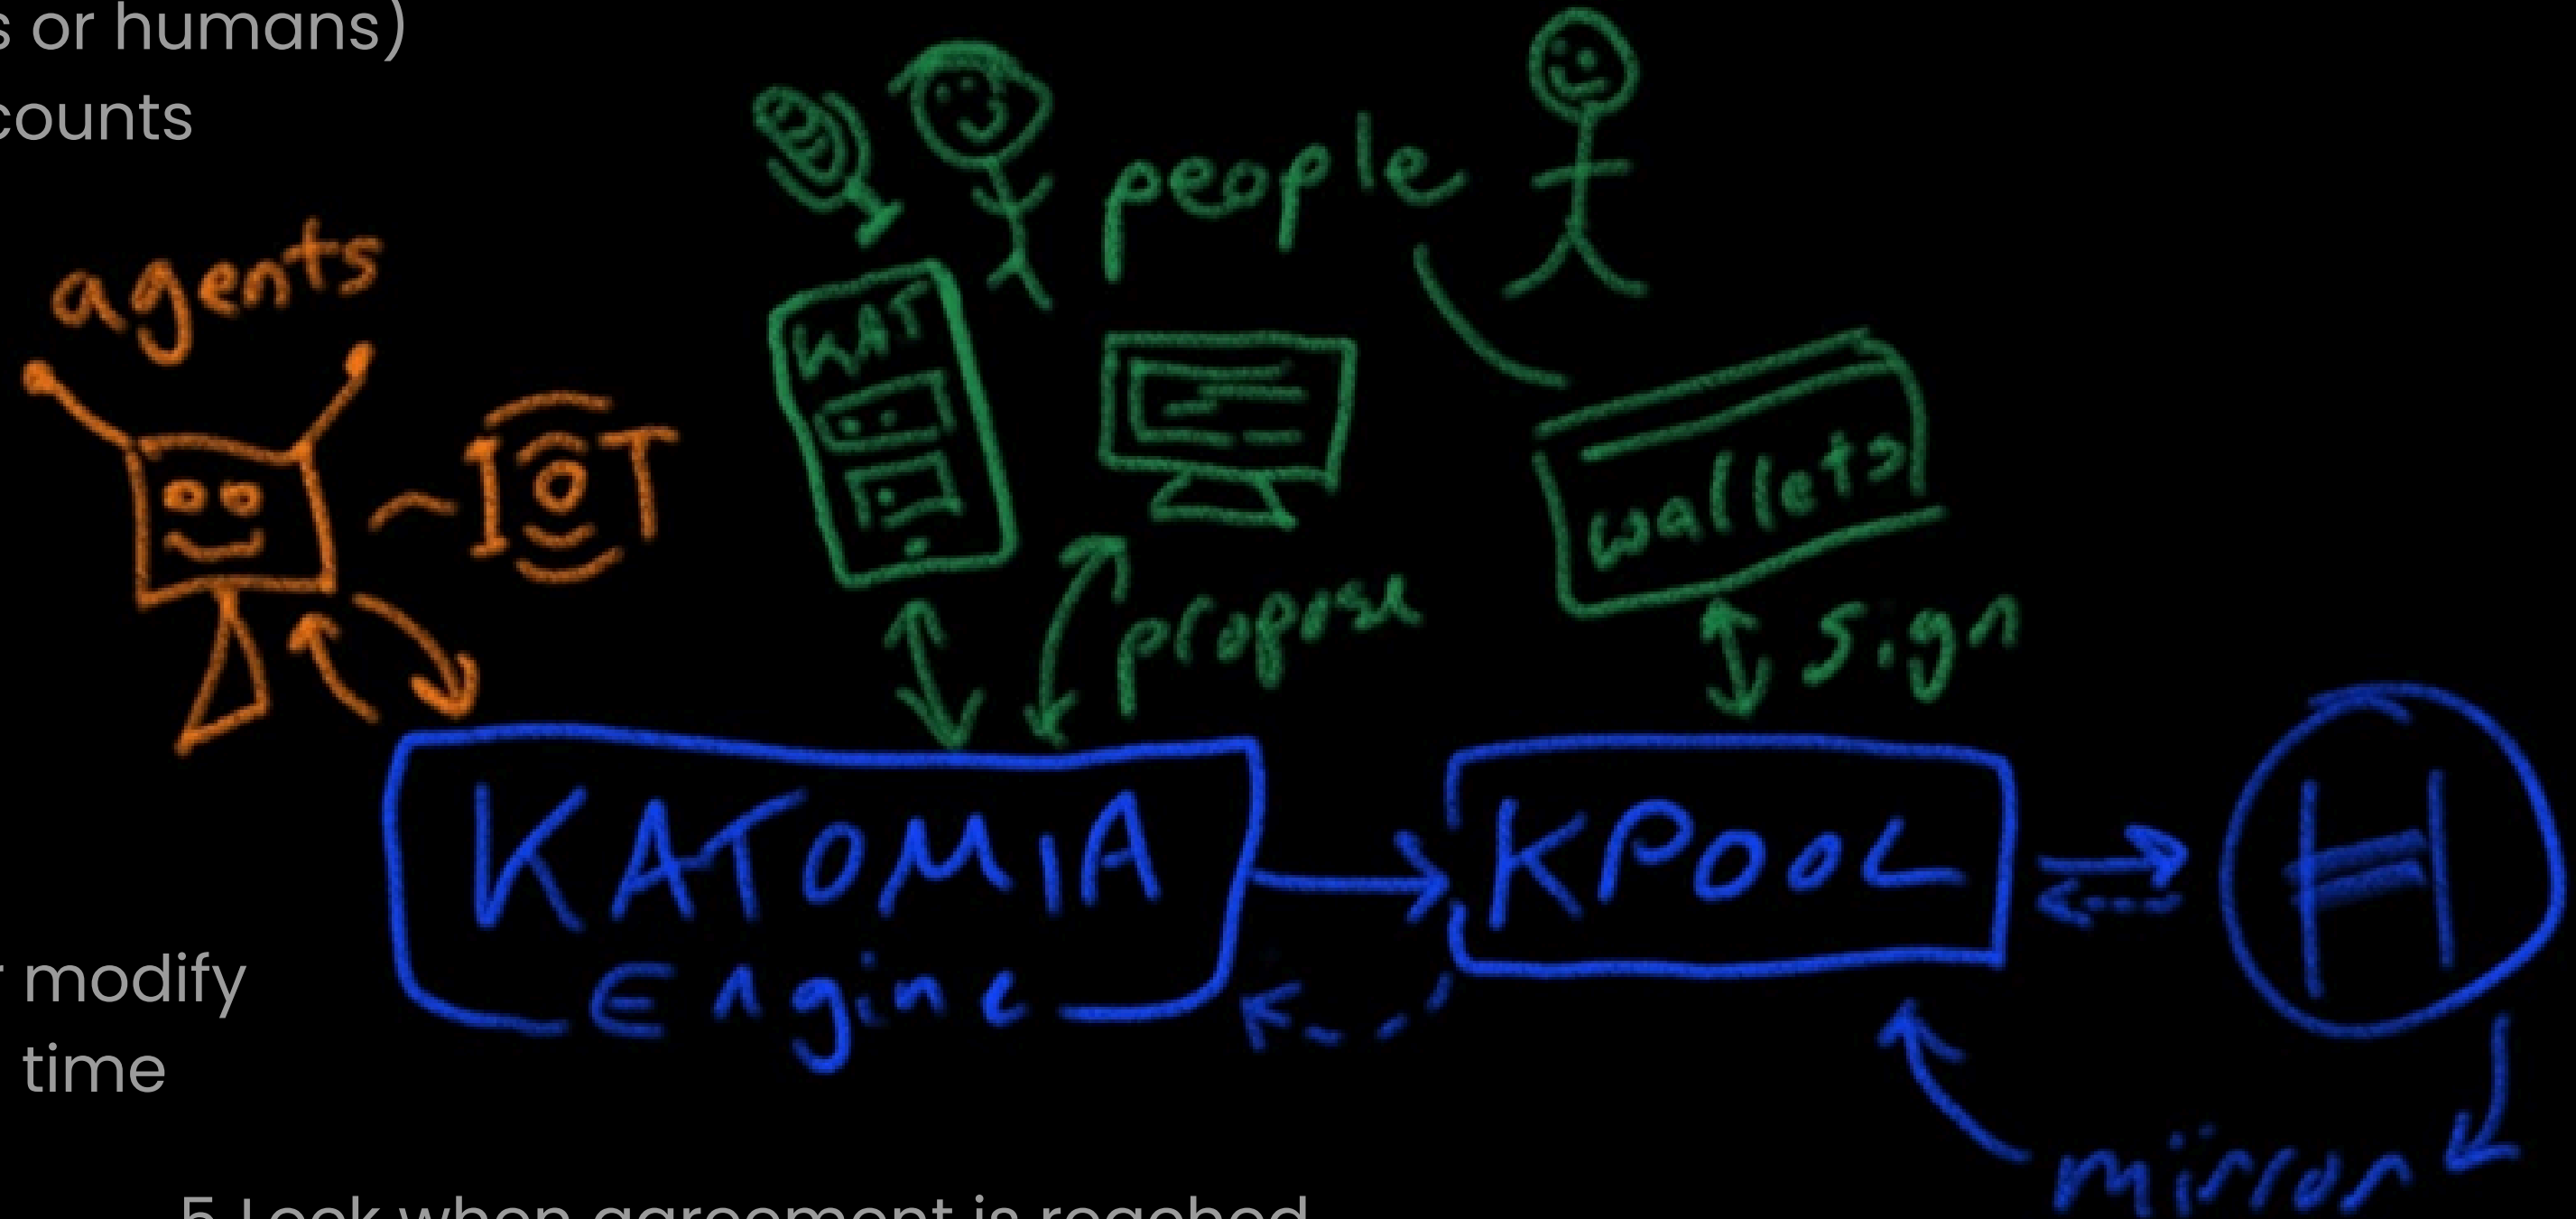

2. Participants (agents or humans) join with Hedera accounts

3. Propose transfers by placing assets into others' baskets

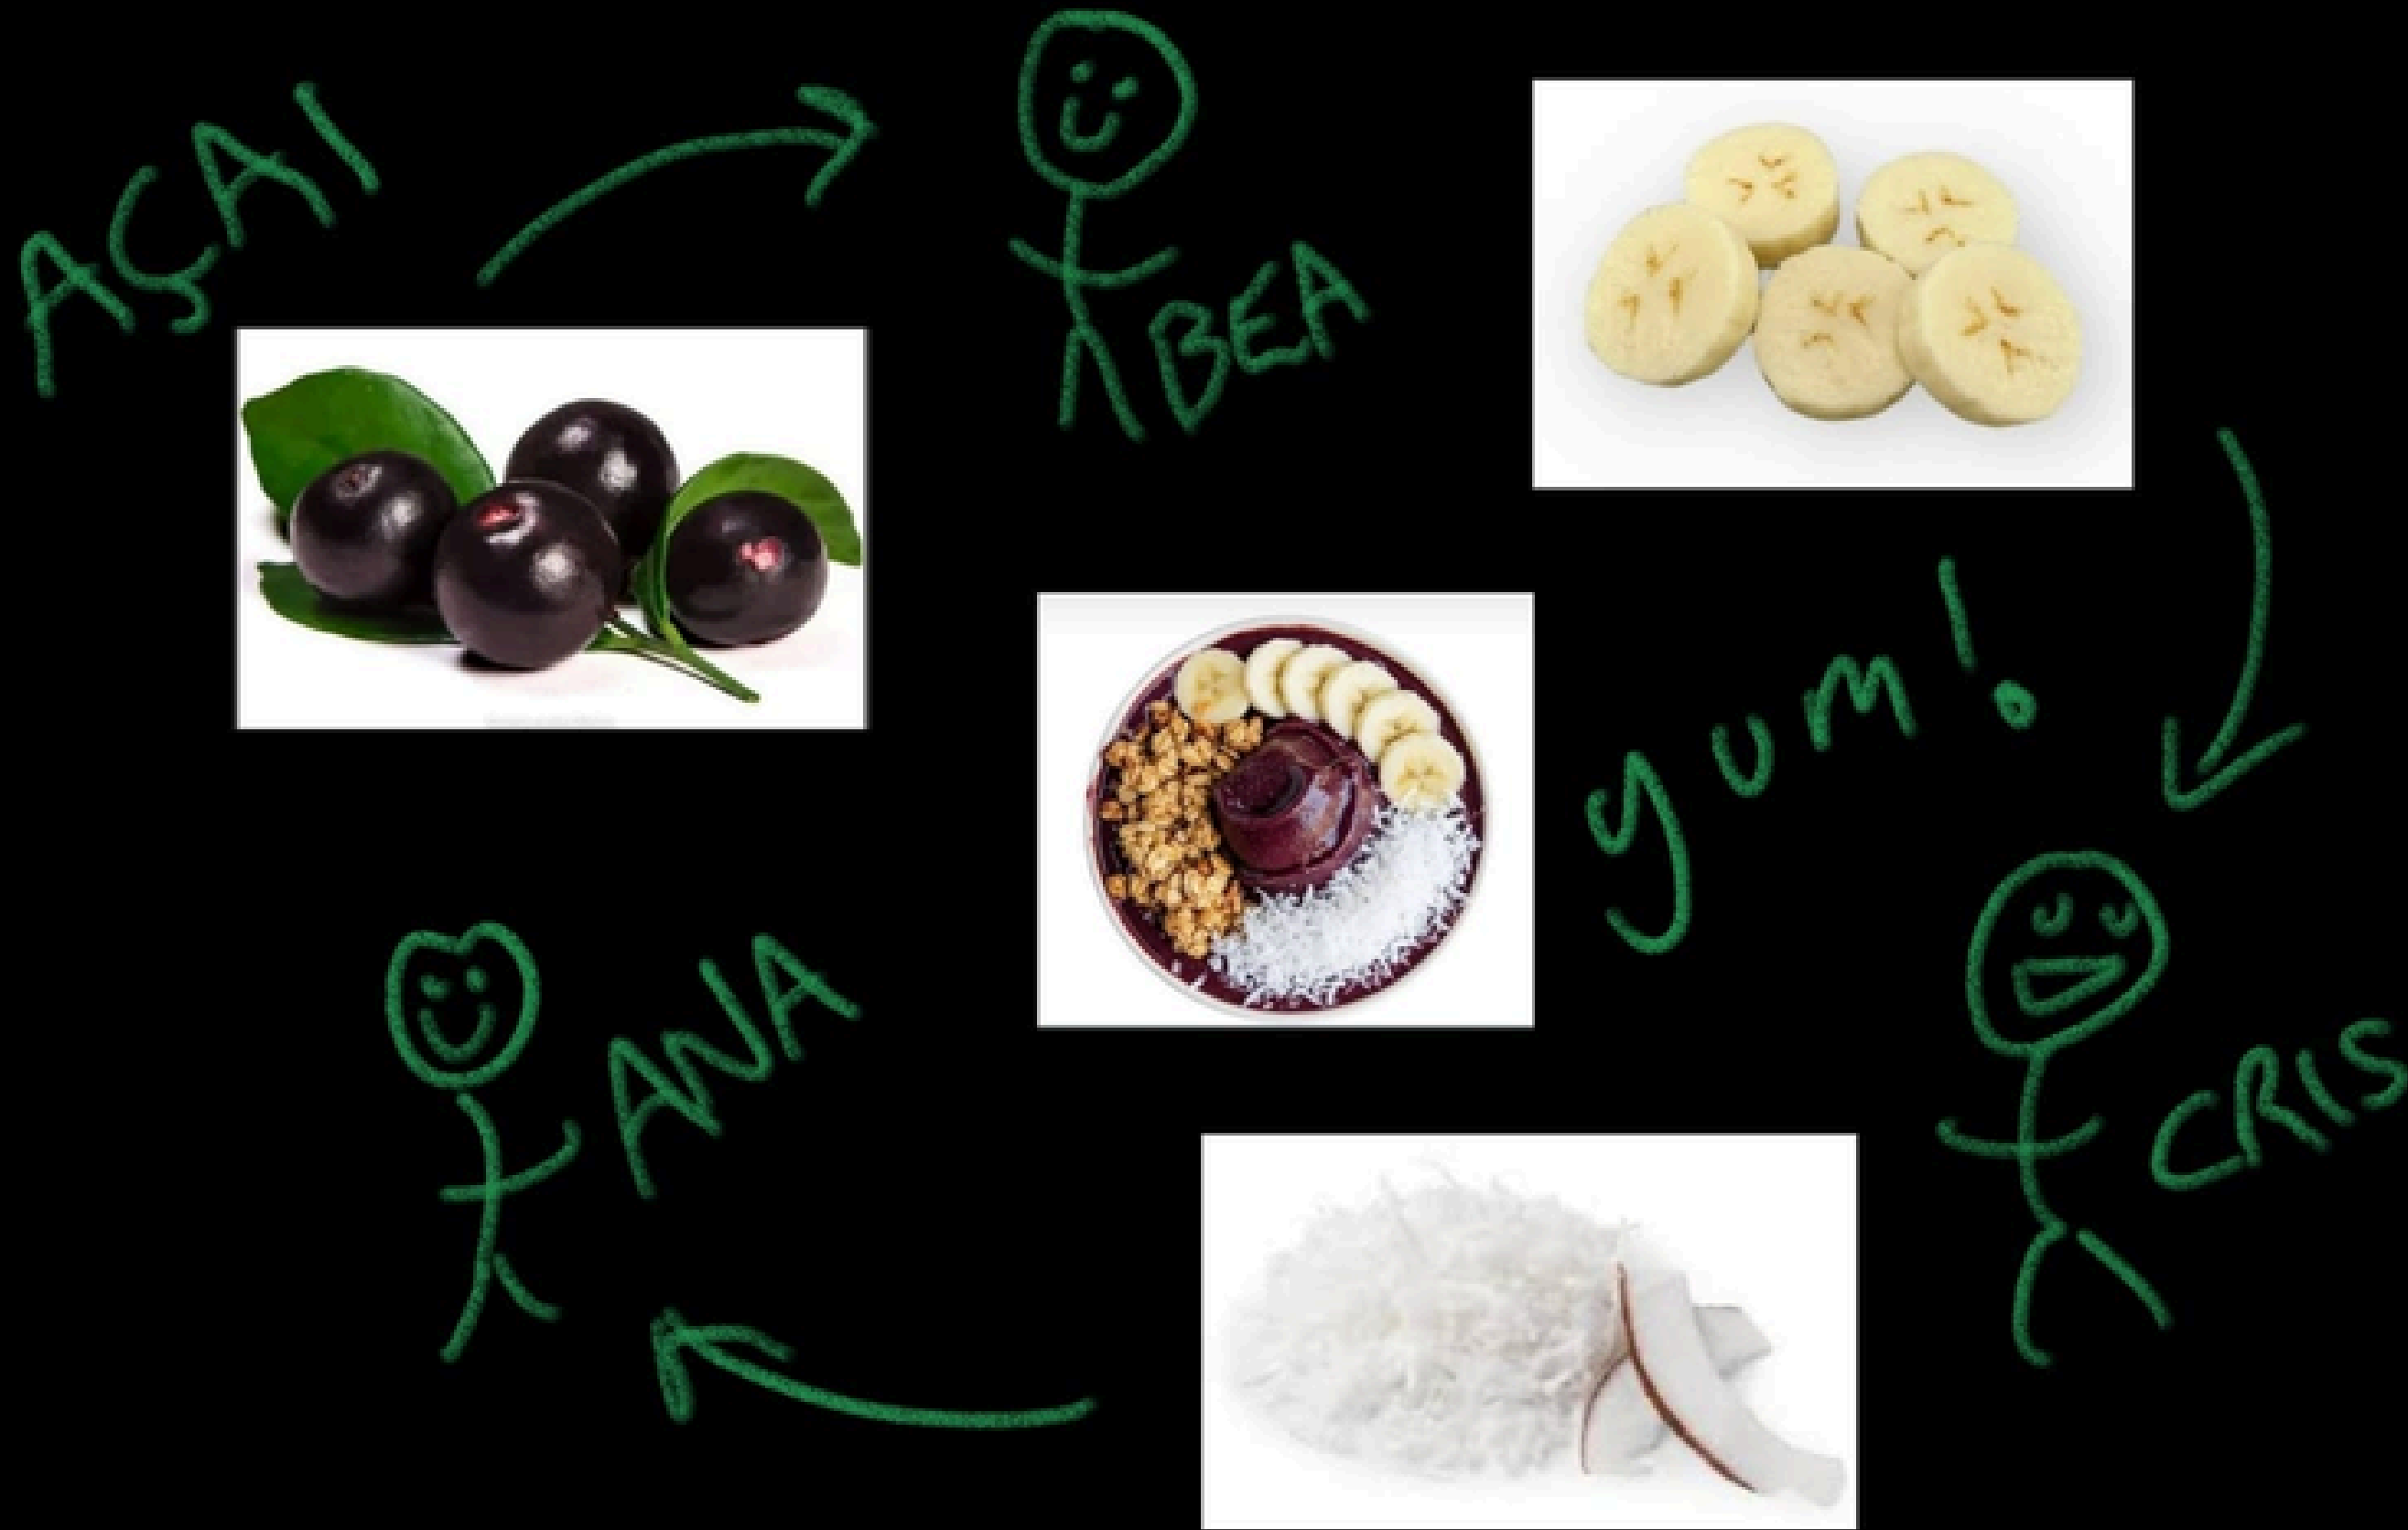

4. Accept, reject, or modify proposals in real time

5. Lock when agreement is reached

6. Sign & execute a single atomic transaction on Hedera

# K Katomia demo - swap ingredients to make an Açai bowl!

See the video demo at [katomia.com/demo](https://katomia.com/demo)

# K Katomia demo

1 Create a coordination space ("game")

2 Participants join with accounts

3 Propose transfers by placing assets into others' baskets

4 Accept, reject, or modify proposals in real time

5 Lock when agreement is reached in real time

5

Account	Store (available)	Reserved (to send)	Basket (receive)
0.0.10177400	XBAR 23.78 USDC 0.85		Bananas, Grapes
0.0.10387180	USDC 0.01		Bananas
0.0.7428530	KGBP 2.50 USDC 1.27		Grapes, Bananas

ASAI → BEA

BEA → CRIS

ASAI → ANA

YUM!

agents → people → propose → KATOMIA ENGINE → KR

Stick figures representing participants: ASAI, BEA, ANA, CRIS.

## What this unlocks

- Multi-party, multi-asset coordination
  - Atomic execution of complex agreements
  - Human + agent collaboration
  - New market structures beyond price
- From trading assets to coordinating outcomes

# Go-to-Market

Three-tier adoption model:

**VIP** — Public / early adopters

- Open access to experiment and explore
- Community-driven growth

**PRO** — Professionals / builders

- Tools for advanced coordination use cases
- Developers, traders, and power users

**ELITE** — Organisations / enterprises

- Consulting and integration
- Real-world deployment of coordination systems

# K Roadmap

## Now

- Working coordination engine (MVP)
- Atomic multi-party execution on Hedera

## Next

- Agent-enabled coordination
- UX for mainstream use

## Future

- Real-world integration
- Coordination as core market infrastructure

# KATOMIA

**Thank you!**
